

TASK 3 – WEBSITE TRAFFIC ANALYSIS

Project Title

Website Traffic Analysis

Objective

Analyze website traffic data to understand user activity, traffic patterns, and website performance using Microsoft Excel.

Dataset Used

Website Traffic Analysis Dataset (Excel)

Executive Summary

The Website Traffic Analysis project was completed using Microsoft Excel to analyze user activity and website performance. The dataset was cleaned by removing duplicate records, handling missing values, and organizing the data for analysis. Pivot Tables and charts were created to examine website traffic by country, date, and event type.

The analysis showed that **Pageview** was the most common event, followed by **Click** and **Preview**, indicating that many users visited website pages while fewer interacted further by clicking links or previewing content. The visualizations also helped identify traffic trends across different countries and time periods, providing valuable insights into user behavior.

Based on the analysis, it is recommended that Alfido Tech optimize high-traffic landing pages, improve call-to-action buttons to increase click rates, focus marketing efforts on countries with higher user engagement, monitor website traffic regularly to identify trends, and enhance the user experience to improve conversions and customer engagement.

Recommendations

1. Optimize high-traffic landing pages to improve user experience and conversions.
2. Add clear Call-to-Action (CTA) buttons to encourage more user clicks.
3. Focus digital marketing campaigns on countries generating the highest website traffic.
4. Monitor website traffic regularly to identify trends and improve website performance.
5. Improve page loading speed and website navigation to increase user engagement.
